

30 May 2024

For immediate release

Senior plc ("Senior" or "the Group"), an international manufacturer of high-technology components and systems, today announces the relocation of one of Senior India Private Limited's ("Senior India") two manufacturing facilities in Gurugram India to a new, larger, state-of-the-art facility in Gurugram. The opening of the new facility marks a significant milestone in the growth strategy of Senior as it positions itself to become the market leading pure-play fluid conveyance and thermal management business.

The new facility with its expanded footprint will operate alongside Senior India's other facility in Gurugram and will increase production capacity, enhance operational efficiency and will support the Group's ability to meet rising global demand for fluid conveyance and thermal management products, particularly Exhaust Gas Recirculation ("EGR") coolers & tubes. These products play an important role in the land vehicle sector, where they increase efficiency and performance and reduce engine emissions.

The new site, which replaces a smaller facility, which has been closed, spans some 76,000 square feet and features cutting-edge technology, advanced automation systems, and sustainable manufacturing practices. The new facility complements Senior India's existing facility in Gurugram and has been established to fuel growth from Senior's continued success in winning content on key truck, off-highway and high-end passenger vehicle platforms.

Mike Sheppard, CEO of Senior Flexonics, commented, "This investment highlights Senior's commitment to the long-term success of our customers, suppliers and employees in India. With the ease of doing business, critical infrastructure and access to a well-educated and qualified labour pool, India offers a business-friendly and cost competitive environment. We are delighted to announce the opening of this new facility which will further enhance our capabilities in India and specifically support the growth associated with our contract wins in the land vehicle sector. With the breadth of these new capabilities, the new facility will provide increased options for Senior's customers as well as providing capacity to support future growth."

A ribbon-cutting ceremony was performed on 17th April 2025, with attendance from Mike Sheppard (Divisional CEO, Flexonics), Shailender Dhawan, (Managing Director & CEO, Senior India Private Limited) and local officials.
